

Windows 10 is Here

Say Goodbye to Painful, Time-consuming, and Costly Migrations

For 30 years, Ivanti has helped thousands of customers with their key desktop and VDI initiatives, including Microsoft Windows migrations and hardware refresh projects.

While Windows 10 has taken off for consumers, it's not without its challenges for enterprise IT. Windows 10 presents IT with a new type of user profile to manage, continuous product updates, universal applications, and much more. With Windows 7 approaching end-of-support, it's time for IT to make migration to Windows 10 a priority—and Ivanti can help.

Say Goodbye to Painful, Time-consuming, and Costly Windows Migrations

The days of going a decade between major migrations are over. With Microsoft's shift to a faster OS release cadence, IT teams face the constant pressure of running multiple Windows versions in parallel, in addition to operating in a continuous state of migration.

Ivanti simplifies and reduces the cost and complexity of any desktop transformation project, including Windows 10, while ensuring optimal user experience and increased levels of productivity. How? Ivanti moves user personalization, files, and settings between disparate Windows operating-system versions automatically.

When users log on to their new workspace, they are presented with a familiar desktop environment. They benefit from a better user experience and become productive right away—and IT receives fewer helpdesk calls.

So How Do We Make Windows Migrations Less Painful?

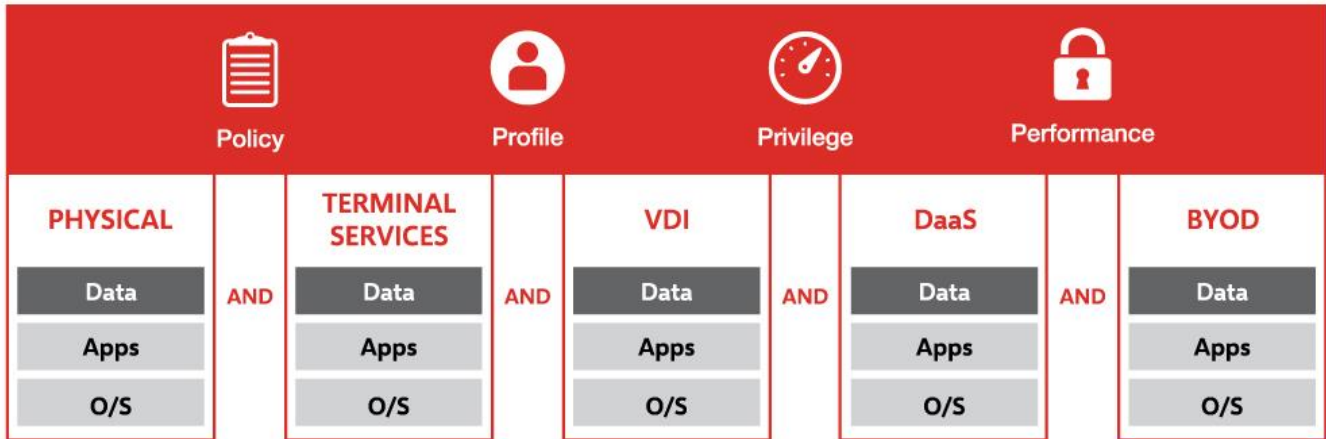

Ivanti provides a simple, centralized, and managed solution for migrating user profiles and data from an existing Windows desktop to a modern Windows 10 desktop. Ivanti® User Workspace Manager decouples all aspects of the user from the underlying desktop, operating system, and hardware. Now user personalization and settings flow automatically between OS versions, and user files follow them to their new desktop automatically, whether it's a physical, virtual, or cloud desktop.

“During Windows migration, we expanded the number of users, which was much easier because a lot of the standardization was taken care of by Ivanti as well as the user settings. We planned on the equivalent of one full-time employee for the migration process. By using Ivanti we saved this resource.”

*Daniel Belanger, Technical Manager
St. Tammany Parish Hospital*

Ivanti also offers a lightweight Windows 10 Migration Accelerator kit that automates the migration of user-profile and file data for point-to-point migrations and upgrades—without extra infrastructure—where continuous sync is not required.

USER DEVICES AND WORKSPACE OPTIMIZATION

WORKSPACE DELIVERY STACK

Ivanti Eases Windows 10 Migrations in Many Ways

- Consistency across devices**
 Ivanti gives users an effortless, consistent migration to Windows 10, reducing support calls. Users benefit from the same experience across all their Windows devices in physical or virtual (VDI) environments.
- Security becomes the norm, not the exception**
 Ivanti helps you enforce least privilege rights without degrading the user experience.
- Simple, secure user data management**
 Ivanti® File Director enables simple, secure access, sync, and sharing of your enterprise files, no matter where they live. It makes existing storage locations like file servers easily accessible from any device and keeps users' files in sync at all times.
- Visibility into endpoint environments**
 Ivanti® Insight helps IT understand exactly what's happening on their endpoints before the migration. You gain a granular understanding of the individual components of logons, including group policy, application usage, printer and drive mapping, scripts, and post-logon actions.

- Control the Hybrid Cloud, now**
 Imagine consistent user experiences across physical, virtual, and cloud-delivered desktops. Ivanti has cloud-critical features built in, including secure web services and integration with Citrix Cloud and Microsoft OneDrive.
- Ready for the future, now**
 Leverage a platform for your future Windows deployments and migrations. Create pilot environments to test benchmarking, tracking, application usage, application administrative issues, legacy application performance metrics, and OpEx forecasting. Know before you migrate.
