Integrations
Plays well with others

Ivanti® LANrev isn't just a great application in a silo. It integrates well with a number of leading third-party applications, improving performance and productivity.

Cisco

Integrating with Cisco ISE, LANrev can enforce required configurations on computers and mobile devices, quarantining non-compliant devices.
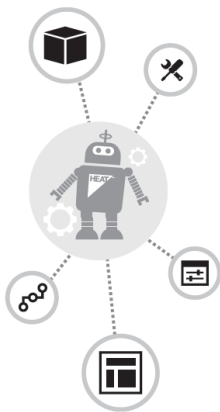

SCCM

Companies that rely on SCCM for management of Windows computers can manage macOS and mobile devices with LANrev, reporting on these devices within the SCCM console.

AD

Active Directory remains the key to most enterprise networks. LANrev fully integrates with AD, allowing user authentication through AD credentials, leveraging AD for certificate-based authentication of email, and building dynamic configuration rules for devices based on Active Directory information.

REST API

Ivanti applications have a large and growing REST API framework, enabling easy integration with virtually any third-party tool.
