

Ivanti Solutions for Epic EHR

Faster, more secure and personalized access to patient data

When used with Epic, Ivanti solutions strive to ensure that clinicians get a secure and compliant computing environment, fast access to clinical information, and a consistent workspace experience from any device, in any location, so they can concentrate on delivering better patient care and remain compliant.

Clinician v CCIO Pain Points

Clinicians rely on technology to help them concentrate on delivering excellent patient care.. They need applications that are responsive, desktops that are fast, and secure access to patient data from any device. A positive clinician's user experience leads to both clinician and patient satisfaction..

Chief Clinical Information Officers (CCIO) want to improve IT efficiency and be more agile without impacting clinical services. Limited staff resources and outdated platforms may negatively impact project success. Lack of budget leads to under investment in critical IT systems where it's needed.

Clinical Workspace Environment Management with Ivanti

Many Ivanti customers and partners have deployed Ivanti's solutions with Epic's electronic health record (EHR) to provide a faster and more secure workspace for clinicians, easing the burden on IT and satisfying CCIO requirements.

In particular, solutions from Ivanti's User Workspace Management product lines optimize the user experience in a Windows desktop, whether physical or virtual. See our customer success stories for more examples where Ivanti has enhanced the user experience and enabled healthcare organizations of all types to deliver improved patient care at <https://www.ivanti.com/customers>.

Benefits provided by Ivanti

- Faster logon times for quick access to clinical data
- Rapid application response times
- Clinicians receive a consistent workspace irrespective of device type or location
- Location-aware printing for regulatory compliance
- Instant protection from ransomware and malicious executables
- Self-service tools reduce IT support calls and eliminate productivity issues
- Remove full admin rights from users, yet allow clinicians to perform the tasks they need to, satisfying compliance
- Increase IT operational savings through reduced admin support and clinician self-service

"Prior to Ivanti, login times were often close to a minute. With Ivanti we reduced initial logins to less than 11 seconds,"

Mike Kramer
VP of IT, Baylor Scott & White Health
