

Top 10 Reasons to Use Velocity:

Ivanti Velocity, powered by Wavelink, allows you to successfully launch into the next generation platform with faster delivery, improved accuracy, and a better customer experience. These are just some of the reasons fueling mobile deployment upgrades to Android.

10

Global support

Our team is available 24/7 to help you resolve any issues that might appear, no matter your region.

9

Voice enablement

Add Speakeasy to your Android mobile deployment to further boost worker productivity.

8

Standard network protocols

TCP/IP routable protocols use standard network administration, offer load balancing and debugging tools, and align with your latest security policies.

7

No servers or middleware

Don't let mobility introduce a single-point-of-failure or ransomware risk to your business.

6

Powerful scripting

Optimize workflows with automation scripts. Plus, use meta tags or device-specific post-processing options for more control.

5

Advanced scanning

Unlock the power of the barcode scanner. Device-specific scanning parameters give you control over parsing barcoded data into fields and more.

4

Modernize in minutes

Configure and deploy modernized telnet screens in minutes with Velocity's rapid modernization.

3

Bring your web apps to Android

Velocity gives you the power to inject custom HTML and CSS to improve how your desktop apps render on various Android device screen sizes.

2

Bring your existing telnet products

Your "green screen" apps can run within Velocity, giving you time to optimize and modernize the user interface at your own pace.

1

Preserve Your Host Systems

Migrate to Android without disrupting your existing enterprise systems (WMS, EPR, etc.). Velocity already works with them.

There are over 10 million active licenses telnet and industrial browser in use today - more than all of our competitors combined. Many are pre-licensed on devices from the leading rugged device manufacturers. So, chances are you're already using our apps. The Velocity framework is designed to help you bring these existing apps along to your next generation mobile deployment.
