

Ivanti IT Asset Management Suite for Healthcare

Gain complete visibility to maximize the performance and value of your hardware and software assets with the Ivanti® IT Asset Management Suite. Reclaim unused software, help meet HIPAA compliance requirements, provide audit defense, and save time with a centralized view of your assets.

Ivanti License Optimizer for both clients and servers takes out the guesswork on where you stand with your effective license position. Know what assets you have, where they are, how they're used, and how they perform for better decisions at any stage of an asset's lifecycle with Ivanti Asset Manager. With the Ivanti IT Asset Management Suite, you get the combined power of both tools, License Optimizer and Asset Manager.

Leverage Powerful Discovery and Inventory Processes

Identify what hardware and software exists in your IT environment to not only prevent security attacks, but also actively manage those assets to help meet HIPAA compliance requirements and minimize procurement costs. Ivanti IT Asset Management Suite aggregates client or server data automatically. Make informed decisions from the moment you purchase an asset through its entire lifecycle. The ITAM Suite publishes performance data and management reports to tablets, smartphones, or medical devices with an Internet browser. Clinicians and IT management teams obtain a complete picture of which assets are in use and gain direct insight into their current state of compliance. Correct information delivered at the right time drives confidence in data and enables accurate decisions with fewer patient errors.

Achieve Complete Visibility of All Your Healthcare IT Assets

Eliminate spreadsheets and gain visibility with business-to-business (B2B) connectors that aggregate manufacturer, vendor, and reseller data such as purchase order numbers, device types, and location mapping from the moment you acquire a new asset. In addition, automated processes improve efficiencies and reveal more usable data on demand to optimize device spend, clinician utilization, and servicing.

Reduce Licensing Overspend and Survive Audits

The costs to a healthcare organization for not complying with licensing agreements can be much more than a true-up, especially to larger organizations that grant smaller, unaffiliated clinics access to their EMR system or other third-party software. When you include the risk of settlement costs, interrupted service, and drawn-out audits, fines can reach the millions of dollars.

Now you can maintain software license compliance for audits and curb overspending on software applications with confidence.

The Ivanti IT Asset Management Suite delivers timely information to auditors and calculates your effective software license position by identifying who is using what software and under what licensing agreement it's covered. You gain better visibility into software and asset lifecycles, licensing, and ownership to help ensure the right clinician has access to the right software when they need it. Reclaim unused software licenses automatically to reallocate needed resources elsewhere, or renegotiate your licensing terms and agreements to reduce the risk of financial drain.

Craft Lifecycle Processes Around Your IT Assets

Knowing what software needs to be purchased, updated, and maintained enables healthcare IT leadership to plan ahead

and avoid costly purchasing decisions. Save time and money with automated processes designed with healthcare IT in mind for asset lifecycle management, including clinician onboarding and offboarding, software audits, and more.

Look to Ivanti IT Asset Management Suite, with both License Optimizer and Asset Manager, to gain complete visibility over your hardware and software assets, maximizing their performance and value for a more healthy asset lifecycle.
