

CrowdStrike Falcon Prevent™ – Next-Gen AV

With more surface area to cover, more mission-critical assets to protect, and more sophisticated threats to defend against, IT Operations and Security teams must find a way to work together better to identify and protect vulnerable IT systems. To help bridge this gap, Ivanti and CrowdStrike have formed a strategic technology partnership that helps joint customers reduce the attack surface and respond more quickly should a threat get through.

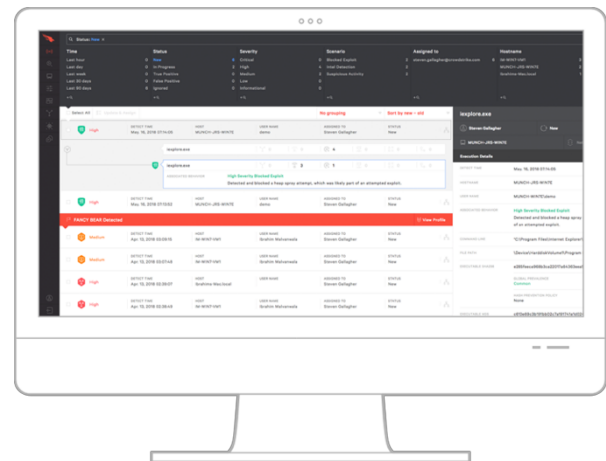

Key Partnership Benefits

Here's how our technology partnership will benefit joint customers. You'll get:

- Deeper protection and control over employee devices
- Better insight and visibility into security incidents and better time to resolution
- Faster remediation of prioritized threats to keep endpoints' data protected

Ivanti delivers industry-leading endpoint security solutions, integrating security controls global experts agree create the highest barriers to real-world attacks (discovery, patch and privilege management, whitelisting, and secure configuration). For its part, the CrowdStrike Falcon platform seamlessly integrates its own suite of security solutions:

- **Next-Generation AV** protects endpoints against all threat types—known and unknown, malware and malware free.
- **Endpoint Detection and Response (EDR)** helps uncover attackers in your organization's environment and remediate the situation.
- **Managed Threat Hunting** provides a dedicated team of expert adversary hunters watching your back 24/7.

- **Threat Intelligence** provides in-depth cyber security analysis and reporting, enabling you to understand adversary motives, anticipate their actions, and prevent them from breaching your organization.
- **IT Hygiene** allows for unprecedented visibility into your environment, so you can identify unauthorized systems and applications in real time and remediate as needed.
- **Additional services**, including supported vulnerability management, malware queries, and malware research, provide further knowledge and enable rapid response to protect against future attacks.

These modular solutions are powered through the cloud via a single lightweight agent. With this unique, integrated platform approach, customers can prevent and detect never-before-seen threats and tailor security responses based on the severity of malicious behavior.

More Than an AV Replacement

Falcon Prevent is the most complete AV replacement solution in the industry, delivering superior protection that operates without the need for constant signature updates, on-premises management infrastructure, or complex integrations. Even the largest organizations can be up and running with Falcon Prevent in minutes.

It's more than an AV replacement, though. Falcon Prevent provides a new generation of prevention features capable of defeating ever-evolving attacks, including commodity malware, zero-day malware, and even advanced malware-free attacks.

- **Known malware prevention** – Weed out the obvious.
- **Machine learning** – Detect and prevent known and unknown malware, whether endpoints are on or off the network.
- **Exploit mitigation** – Stop attacks that exploit vulnerabilities to compromise hosts.
- **Whitelisting/blacklisting** – Block or allow custom hashes.
- **Indicators of attack (IOAs)** – Correlate endpoint events to detect stealthy behavior that indicates malicious activity.

Full Protection, Online and Off

Falcon Prevent leverages protection technologies in the cloud and on the endpoint, providing full prevention when disconnected from the network and using the power of the cloud when connected.

About CrowdStrike

CrowdStrike is the leader in cloud-delivered endpoint protection. Leveraging artificial intelligence (AI), the CrowdStrike Falcon® platform offers instant visibility and protection across the enterprise and prevents attacks on endpoints on or off the network. CrowdStrike Falcon seamlessly unifies next-generation AV with best-in-class endpoint detection and response, backed by 24/7 managed hunting. Its cloud infrastructure and single-agent architecture take away complexity and add scalability, manageability, and speed.

CrowdStrike Falcon protects customers against all cyber-attack types, using sophisticated signatureless AI- and IOA-based threat prevention to stop known and unknown threats in real time. Core to its innovative approach is the CrowdStrike Threat Graph™, which analyzes and correlates over 50 billion events per day from millions of sensors deployed across more than 170 countries, uniquely providing crowdsourced protection for the entire customer community.

About Ivanti

Ivanti unifies IT and Security Operations to better manage and secure the digital workplace. From PCs to mobile devices, VDI and the data center, Ivanti discovers IT assets on-premises and in the cloud, improves IT service delivery, and reduces risk with insights and automation. The company also helps organizations leverage modern technology in the warehouse and across the supply chain to improve delivery without modifying backend systems. Ivanti is headquartered in Salt Lake City, Utah, and has offices all over the world. For more information, visit www.ivanti.com and follow @Golvanti.
