

Turn Your data into Warehouse Operational Insights to drive better decisions

Managing warehouse processes requires real-time and comprehensive analytics that can provide measurable insights to help businesses make informed decisions. Warehouses and distribution centers recognize that top-performing supply chain organizations are driven by data.

Although supply chain businesses may have different preferences as to which Key Performing Indicators (KPIs) are most meaningful to them, there is one common need that everyone shares – **eliminating downtime and improving productivity**.

Bring it all together with Ivanti Velocity and Neurons for IIoT

With our Operational Insights offering, customers with Ivanti Velocity TE or Web can immediately connect to Ivanti Neurons for IIoT to achieve enhanced and customizable data to help mitigate risks to help your business thrive.

- Enable your customers to start collecting reliable data in real-time
- Take action to identify areas of improvement
- Fix the most common undetected and unreported issues that impact warehouse productivity

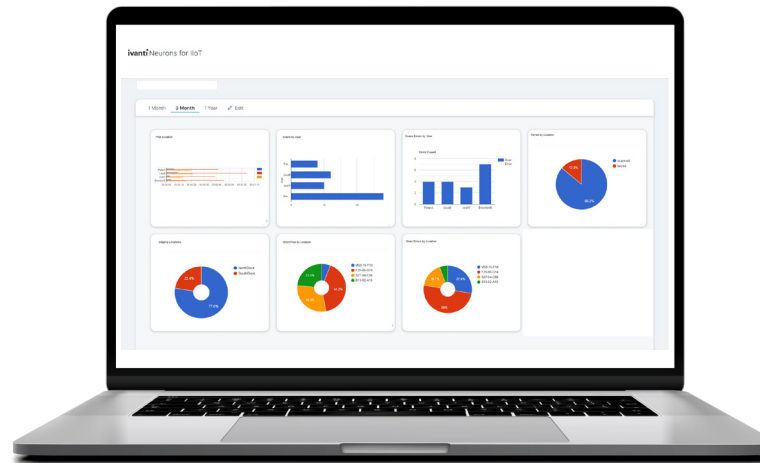

Allow the kind of connectivity warehouses need for enhanced visibility on picking, replenishing, orders, inventory, and transportation management as well as resource planning.

Get Insights for Issue Resolution

Optimize and monitor process effectiveness and take corrective measures. Gather information in real-time from any mobile barcode scanners running Ivanti Velocity software and visualize KPIs in a meaningful way.

Predict and Prevent Delays

Operational Insights will give you what you need to fix common issues immediately and measure the impact of those changes in real time. This type of purview will allow you to take the right action today and be proactive, not reactive.

When it comes to increased demand, heightened productivity and labor shortages, there are obvious commonalities to everyday challenges.

- Damaged Barcodes
- Bad Barcodes
- Tracking Productivity and Training
- Error Tracking

Drive Automation to Measure Results

Extend automation and start optimizing device specific insights that help you measure performance driven processes. With Velocity, it's easy to know what the state of your device is – what data is available, what data isn't available – all because our Velocity client runs on the device itself without having to modify or replace your backend IT or WMS systems.

Create an Effective Supply Chain Dashboard

With the information in hand, customizing a dashboard that reflects the critical KPIs and supply chain metrics is crucial. Drive data driven decisions to streamline your warehouse operations by identifying the most opportune areas of productivity improvement that help you address unique business requirements.
