

# Managing All Your Mobile Endpoints

Your organization has likely been managing line-of-business devices long before smartphones and BYOD became part of the corporate IT conversation. Over the years, many companies have searched for a way to standardize on one mobile device management (MDM) product for all their mobile deployments, but mobile device management options haven't been able to meet the needs of both Operations and Corporate IT.

**That is, until now.**

## Unify Device Management in a Single Platform

Managing all devices in a single solution brings efficiencies for IT managers and analysts across tech teams, with much more flexibility:

- Reconcile device accounting across the ecosystem
- More visibility to vulnerabilities across threat vectors
- Unify technical support and service procedures
- Compatible with in-house or Managed Service Provider (MSP) models

Sign up for a 30-day trial and see how Ivanti Neurons for MDM meets the needs of both Operations and Corporate IT

## MDM Everyone Agrees On

Finally, operations and corporate IT can agree on an MDM solution that fits the needs of the whole business mobility environment: Ivanti Neurons for MDM. Unify all your endpoint management into a single platform that allows corporate workers to work everywhere, while your operations teams have devices that are up to date so they can be productive all shift long.
