

Velocity Forms: Compliance Without the Clipboard

Supply chain operations require a range of documentation to maintain regulatory compliance and keep the business running. But paperwork is a productivity bottleneck. Digitizing mandated information by incorporating into mobile workflows helps you boost compliance while saving time through an improved worker experience.

Add Your Forms

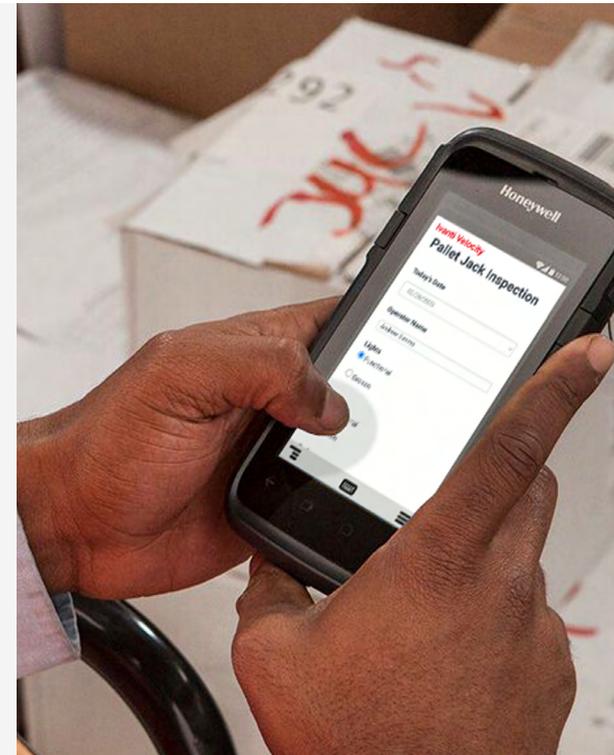

Present workers with Velocity Forms in a format that fits your business. Digitize equipment inspections, safety checklists, incident reports, damaged goods documentation and more.

Gated and Ad-hoc Forms

Define mandatory forms required before advancing to the next stage in a task workflow, helping ensure documentation is completed, while building a library of additional forms for exception handling use cases.

Alerts to Archives

Automate how each Velocity Form is handled: immediately communicate incident reports via email or route completed safety checklists to a secure FTP location for reference during future audits.

Service Asset Management

Device check-in/check-out
IT support tickets

Time Tracking

Daily driver logs
Dock turn-around

Maintenance

Yard management
Repair requests

Inspections

Forklift/Pallet jack
Container/Crain

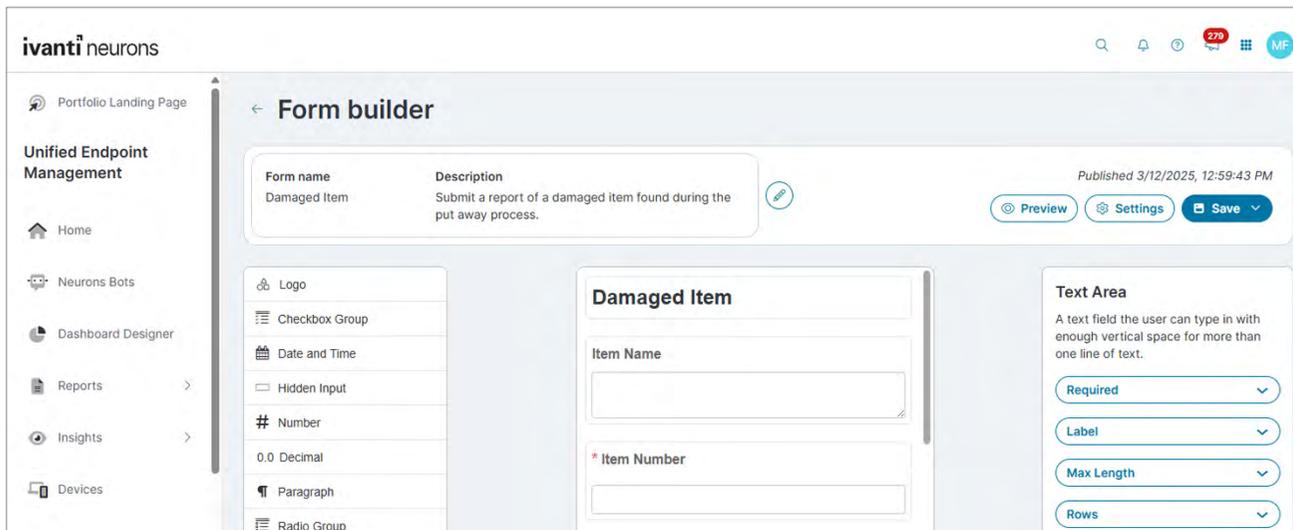

Safety

Near-miss
Incident/Injury

Transform the Experience

Put away the clipboard. Velocity Forms reduces travel time and material costs associated with paper forms, with digital, sharable forms that help make it easier to maintain compliance.
