

# ACSC Essential Eight Solution Bundles

As the cyber threat landscape intensifies and the risks continue to increase many organisations are looking to align with cybersecurity frameworks to increase their security defences and cyber maturity.

Ivanti has helped government, financial, healthcare, education and utilities organisations gain compliance with the ACSC Essential Eight for over 10 years in Australia.

Ivanti has now developed two Solution Bundles to further simplify achieving compliance at a chosen level of maturity.

## Ivanti Value Drivers

Ivanti solutions are designed to help customers reduce cyber risks by mitigating the highest risks in their environment first. The goal is to reduce the attack surface to make sure all hygiene efforts have a positive impact and move the needle on compliance.

### Reduce Costs

Fast time to value through quick deployments helps to reduce initial costs and through automation and integration, a reduction in ongoing costs to manage the Total Cost of Ownership.

### Optimise Employee Experience & Productivity

While securing devices is the objective, maintaining productivity and ensuring no negative impact to the employee experience is essential. Ivanti solutions are focused on a seamless digital employee experience that keeps users safe and productive.

## Professional Bundle

The Professional Bundle delivers outcomes to help organisations improve their maturity in line with four of the ACSC Essential Eight controls.

- Application Control
- Restrict Administrative Privileges
- Patch Applications
- User Application Hardening

Application Control & Privilege Management are delivered using a dynamic policy engine that allows administrators to quickly deploy context aware policies to their devices.

Exemption policies are easy to initiate to keep users productive with optional integration directly to your Ivanti Neurons ITSM or alternative ITSM solution.

The Professional Bundle is designed for customers using Microsoft Intune to deploy their operating systems patch updates.

Ivanti helps automate patching of applications through direct integration to Intune. The simple wizard driven SaaS solution allows for routine patching of common applications with little to no effort.

## Premium Bundle

The Premium bundle introduces two additional capabilities to the Professional Bundle.

Active or passive network scanning with connectors to 3rd party systems creates a real-time inventory of assets. This visibility allows customers to understand the threat landscape that must be secured.

To extend capabilities further, standalone risk-based SaaS patching for the OS and applications is added rather than the basic Intune integrated solution.

The Premium Bundle caters for the following Essential Eight Controls:

- Application Control
- Restrict Administrative Privileges
- Patch Operating Systems
- Patch Applications
- User Application Hardening

Customers can import scan results from their vulnerability scanners to automate the process of converting lists of vulnerabilities to patch names. This delivers a large reduction in manual and mundane tasks, reducing time to patch and associated costs.

Threat intelligence feeds allow administrators to easily see the risk rating of a vulnerability. Ensuring the highest risks are remediated first.

This provides maximum attack surface reduction and alignment with ACSC maturity controls which state exploited exposure remediation must be complete within 48 hours.

The Premium Bundle allows administrators granularity, flexibility and automation capabilities to ensure maximum risk reduction, compliance, and low management costs.

**“We have cut overhead and staff time as a result of Ivanti’s automated patch updates, and the interactive dashboard makes the entire program easier to manage. Ivanti, in all aspects, has exceeded our expectations.”**

Department of Transport Victoria

## Outcomes Matter Most

To aid successful implementation and fast time to value two operational assistance services are available:

- Self-paced online education – enabling you to get the key skills need to operate the technology, or,
- Consulting services to deploy to pilot – experienced consultants engaged to configure the solutions to optimise outcomes

Essential 8 Control	Professional	Premium
 Application Control	✓	✓
 Restrict Administrative Privileges	✓	✓
 Patch Operating Systems		✓
 Patch Applications	✓	✓
 User Application Hardening	✓	✓
