

Easily Migrate your Apple Ecosystem to Neurons for MDM

Apple's latest operating systems — macOS 26, iOS 26, iPadOS 26 and later — free organizations from a longtime barrier to migrating to a preferred mobility management platform. Migration is now handled entirely through Apple Business Manager, delivering significant benefits.

No changes, re-enrollment or manual processes required within the MDM.

All user data and settings remain intact throughout migration.

Migrate supervised and unsupervised devices via a single reboot.

Schedule migration deadlines to ensure compliance.

Centralize management of Mac laptops, iPhones, iPads, Apple Watches and more!

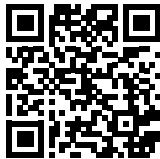

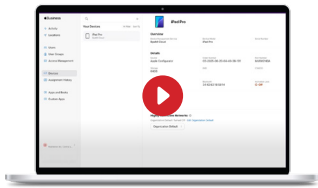

Flexibility to Fit Strategic IT Goals

- Move on from an MDM product admins have felt “stuck with.”
- Migrate from an on-premises MDM, such as Ivanti Endpoint Mobility Manager (EPMM), to cloud-based Ivanti Neurons for MDM.
- Make it simple to reassign shared devices in healthcare, education or retail use cases.
- Minimize disruption to end users during reorganizations, whether merging organizations or spinning off subsidiaries.

Get started with your migration.
