# Velocity Forms: Verifying Proof of Condition

From the manufacturing floor to the hands of the end consumer, materials and products pass through many supply chain links. Velocity Forms documents proof of condition at each link, avoiding chargebacks, identifying issues early and ultimately improving customer satisfaction.

Velocity Forms makes it easy for mobile workers to perform proof-of-delivery or incoming inspection tasks digitally, ensuring uncompromised data quality as goods travel through the supply chain from one trading partner to another.

- Velocity Forms' intuitive cloud-based design console lets organizations generate unique forms designed to fit their specific workflows and data collection requirements.

- Ad-hoc forms (including incident reports) allow workers to report issues without exiting their Velocity Telnet or Web app workflow.

- Forms can be deployed within Ivanti Velocity Telnet and Web application workflows, allowing workers to launch and complete the required form at specific steps within each task (such as completing an incoming inspection form while performing a receiving workflow).

Pallet Validation

Ensure the correct goods are delivered, and that their contents are not damaged. This is essential to avoiding chargebacks for misshipments of damaged goods.

Food Safety

Collect and document temperature readings on items shipped in refrigerated trailers or distributed from hot food serving stations. This provides proof that contents are kept at appropriate temperatures and are safe to serve.

Field Service

Out on the road, paper is at even higher risk of being lost or damaged. Whether a HVAC, utility, or other field service technician, the ability to document digitally prevents data loss and expedites scheduling, billing and other workflows.

Move away from slow, error prone, paper documentation. Get instant proof-of-condition validation throughout your supply chain, avoiding the expenses associated with returns and charge backs while improving customer satisfaction. Start creating chain of custody forms with Velocity Forms. Visit ivanti.com/forms.
