Ivanti Neurons for Discovery
Consolidated Asset Intelligence Without Blind Spots

Modern enterprise environments demand uncompromising visibility, control and risk mitigation across distributed, cloud and hybrid assets. Ivanti Neurons for Discovery delivers unified continuous, automated asset identification, providing real-time insight through active and passive discovery, seamless integration with third-party sources and intelligent data aggregation.

This robust foundation enables deep software estate management with complete inventory, license management, usage analytics and compliance oversight, while advanced vulnerability aggregation maps exposures directly to assets for actionable, risk-driven insights. By normalizing data and activating intelligent workflows, Ivanti empowers organizations to eliminate blind spots, optimize software and license spend, and confidently secure every asset across its technology landscape.

Why manage every asset now?

Reveal every asset:
Continuous, connected discovery

Unmanaged devices and unknown endpoints are top security and compliance risks. Ivanti Neurons for Discovery combines active and passive scanning with a robust ecosystem of integrations to ensure you uncover every asset (whether on-premises, in cloud, remote, IoT or in highly restricted networks), eliminating shadow IT and technology blind spots. Real-time discovery means your inventory is always accurate and up to date, forming the essential first layer of defense.

Build trustworthy data:
Advanced normalization and unification

Disparate discovery data alone isn't enough. Ivanti's powerful normalization and reconciliation engine intelligently merges and translates data from disparate sources into a clean, consistent and actionable asset inventory. This single source of truth fuels downstream workflows, improves decision quality and prepares your organization for audits and operational change. Duplicate, fragmented or outdated records are eliminated, ensuring your asset landscape is always clear.

Optimize your software estate:
Inventory, compliance, and spend control

Software asset management is vital to reduce risk and control costs. Ivanti Neurons for Discovery delivers comprehensive software inventory, real-time license management, warranty and contract tracking, and automated usage analytics. Instantly identify unused or underutilized applications, optimize license allocation and capture accurate purchase and renewal records. Simplify audits, avoid unnecessary spending and maintain continuous compliance across every software asset in your environment.

Accelerate response:
Integrated vulnerability management

Today's threats require more than just visibility — they demand immediate action. Ivanti Neurons for Discovery aggregates vulnerabilities and exposures from multiple scanning tools, correlating each to affected hardware or software assets in real time. This deep context enables teams to prioritize and remediate vulnerabilities rapidly, minimizing potential impact and stopping threats before they materialize.

Expose and act on risk:
Aggregated exposure insights

Managing cyber risk means connecting the dots across devices, users, software and vulnerabilities. Ivanti's exposure aggregation consolidates risk intelligence into a single glass-panel dashboard, making it simple to analyze vulnerabilities, compliance gaps and evolving threats across your entire IT landscape. Rich, contextual insights deliver the clarity and confidence to take smart action, drive compliance and protect business-critical services — no matter how fast your environment changes.

Confident control through consolidated asset intelligence

Blind spots expose organizations to security breaches, compliance failures and operational inefficiencies. Ivanti Neurons for Discovery provides comprehensive visibility, asset normalization and aggregated exposure insights needed to close gaps, accelerate risk response and enable compliance. By seamlessly connecting asset intelligence to IT operations, remediation and reporting, Ivanti supports proactive management and resilient, secure environments. With Ivanti Neurons for Discovery, organizations can protect every asset, optimize their resources and confidently face the demands of modern IT.

Discovery: The foundation for combined IT and security operations

Every transformation starts with visibility. Ivanti Neurons for Discovery provides the trusted, real-time asset intelligence that fuels every IT and security function — from populating AMDB and CMDB systems to powering ITAM, ITSM, Security, DEX and Exposure Management. By delivering a single, accurate source of truth, Discovery becomes the backbone of operational resilience, enabling organizations to detect, decide and act with confidence across their digital estate. Start with Discovery and build the intelligence that propels your organization into the future.

About Ivanti

Ivanti is an enterprise software company that provides a comprehensive IT and security cloud-based platform. Ivanti provides software solutions that scale with our customers' needs to help enable IT and Security to improve operational efficiency while reducing costs and proactively reducing security risk. The Ivanti Neurons platform is cloud-native and is designed as a foundation of unified and reusable services and tools for consistent visibility, scalability and secure solution delivery. Over 34,000 customers, including 85 of the Fortune 100, have chosen Ivanti to meet challenges head-on with its end-to-end solutions. At Ivanti, we strive to create an environment where all perspectives are heard, respected and valued and we are committed to a more sustainable future for our customers, partners, employees and the planet.
