

10 Reasons Velocity Web Outperforms Chrome, Safari, and Edge for Supply Chain Operations

Consumer browsers like Chrome, Safari and Edge were designed for personal browsing and convenience, not pallet scans and warehouse throughput. In supply chain operations, downtime isn't inconvenient — it's expensive. When every second counts, your business needs an industrial mobile platform designed to get the job done. Ivanti Velocity Web is purpose-built for the frontline, delivering the industrial-grade capabilities your consumer browser was never designed to provide.

1

The only SAP-certified mobile browser: Velocity Web is the only certified compatible mobile browser certified for use in SAP, S/4HANA and EWM environments. Velocity Web integrates seamlessly without needing to change your existing SAP systems.

2

Compatible with your ERP and WMS: Velocity Web connects natively to enterprise systems, including Oracle, Manhattan Associates, BlueYonder and more with no changes to host systems.

3

Integrates with hundreds of devices: Deep data capture integration with hundreds of rugged devices from over 50 manufacturers means your team is productive from day one, regardless of your hardware.

4

Reduce manual data entry and automate multi-step workflows: Scripting and automation consolidates multiple task steps and minimizes keyed data entry to accelerate productivity and reduce costly errors on the floor.

5

Intelligent barcode data parsing: Context-aware handling of auto-ID collected data, specific to workflow data fields and screens — eliminating manual corrections and keeping workers in flow.

6

Full kiosk enforcement keeps workers on-task and data secure: No URL bar. No back button. No distractions. Velocity Web enforces approved workflows, and unlike consumer browsers, there is zero customer data collected for sale and no privacy concerns.

7

Task-specific keyboard customization: Configure and present the most appropriate keyboard for every data field or screen, reducing input errors and training time.

8

Optimized for every screen: Velocity Web's enhanced browser interface adapts for mobile devices of varying screen size, ensuring consistency across multiple device types.

9

Hands-free voice-directed workflows: Velocity Web integrates natively with Velocity Voice for hands-free, text-to-speech and speech-to-text productivity with no changes to enterprise systems required.

10

Built for operational transformation: Growing support for emerging technologies including autonomous mobile robots (AMRs), temperature sensors, heads-up displays (HUDs) and more.

"Free" consumer browsers aren't built to help meet the demands of today's or tomorrow's supply chain. Velocity Web is purpose-built to handle the demands of your operations, delivering speed, accuracy and faster uptimes.

See how mobile workers deliver success with Velocity.
