Microsoft has released updates for December 2024. The release looks pretty straight forward. Microsoft resolved 71 new CVEs affecting Windows OS, Office, Sharepoint, System Center Operations Monitor, Defender and a Microsoft AI project called Muzic. A Third-party update from Adobe rounds out the month, but the lineup is pretty light from a security perspective. Priority wise the top priority for December is the Windows OS update, which accounts for 58 CVEs including all 16 Critical and the one Known Exploited CVE.
